📄 PROFILE

Frontend Developer with professional experience in React and Angular, and recent hands-on experience with Next.js and Node.js. Specialized in building web applications and platforms within the banking sector and asset management systems. Experienced in collaborative team environments, following best development practices and continuously evolving with new technologies.

🌐 LANGUAGES

Spanish ● ● ● ● ●
Native

English ● ● ● ● ●
English - B2

🧠 SKILLS

React.js | Next.js | TypeScript |
Angular | Node.js | Express |
REST APIs | OAuth | GraphQL |
NoSQL | Docker | CI/CD | Git |
Testing | Jest | Data Visualization

🧠 FRONT-END

React.js, Angular, Next.js, React Hooks,
React Router, JSX, Functional and Class
Components, Styled Components, React
Query, SWR, NextAuth

🎓 EDUCATION

Ciclo Formativo de Grado Superior de Desarrollo de Aplicaciones Web,

IES Puerto de la Cruz - Telesforo Bravo

09/2020 – 05/2022

Developed solid full-stack web development skills, building a general understanding of how modern web applications are built.

Key competencies include:

- Front-end fundamentals with HTML, CSS, and JavaScript, understanding structure, styling, and interaction in web applications.
- Back-end fundamentals with Java and PHP, applying the MVC (Model-View-Controller) pattern.
- MySQL database management, including data modeling and queries.
- Understanding of server-side logic, database connectivity, and REST API structure.
- Knowledge of deployment, virtualization, and environments using Jenkins, Docker, and Apache.

💼 EXPERIENCE

Bosonit, Consultor front-end

03/2022 – 11/2023 | España

Project 1: Internal Asset Management

Participated in the development of an internal asset management application to track technological equipment assigned to different users and departments.

Responsibilities and achievements include:

- Front-end development using Angular, Angular CLI, and Angular Material.
- Creation of forms and views for asset management and visualization.
- Implementation of modules to manage relationships between users and assigned resources.
- Collaboration with the back-end team for data integration and workflow definition.
- Use of Git and GitLab in collaborative environments.
- Contribution to continuous product improvement under agile methodologies.

Project 2: Banking Sector

During this stage, I developed an application for the banking sector from scratch, taking responsibility for the front-end using React.

Responsibilities and achievements include:

- Implementation of dynamic forms and complex validations using React Hooks and external libraries.
- Integration of testing with Jest and internationalization (i18n) for multilingual support.
- Worked under Scrum methodology in sprints, collaborating with back-end, design, and QA teams.
- Use of Git for version control and Trello for task management, maintaining regular coordination with the client.

BACK-END

Node.js, Express, REST APIs, GraphQL, JWT, OAuth, WebSockets, Serverless Functions, Webhooks

BBDD

PostgreSQL, MongoDB, MySQL, SQLite, Prisma, Firebase

DEVOPS

Docker, Git, GitHub, GitLab, CI/CD, GitHub Actions, Jenkins, Vercel

TOOLS & WORKFLOW

GitHub Copilot, Visual Studio Code, Postman, Docker Desktop, Vercel, Jira, Trello, Scrum, Kanban, Virtualization

TECH LANGUAGES

TypeScript, Java, Python, PHP, SQL, Bash

STATE MANAGEMENT

Redux, Zustand, Context API

UI & STYLING

CSS3, SASS, Tailwind CSS, Responsive Design, Material UI, Flexbox, Grid

TESTING

Jest, Unit Testing, Integration Testing, Mocks, Spies, Test Coverage, React Testing Library

ADDITIONAL SKILLS

Internationalization, Dark Mode, Cookies, Advanced Validation, Dynamic Forms

PROJECTS

Portfolio web

2026 – Present

Currently developing my own portfolio website with a custom design. The application features a front-end built with Next.js and a back-end using API Routes to expose a REST service, integrating TypeScript, Tailwind CSS, React Hooks, testing with Jest, internationalization (i18n), dark mode, bbdd, and best development practices using Git and GitHub. This project will serve as a central space to showcase my past, present, and future work, combining modern functionalities with an optimized user experience.

CERTIFICATIONS

NodeJS: De cero a experto

2026

During this course, I learned Node.js from scratch, building modern backend applications and understanding its role within the full-stack ecosystem. I developed REST APIs using Express, applying Clean Architecture and best coding practices. I also implemented testing with Jest, managed asynchronous operations and events, and worked with WebSockets, webhooks, and serverless functions for real-time applications. Additionally, I worked with databases such as PostgreSQL, MongoDB, and file systems, applied design patterns like the Repository Pattern, and deployed applications in environments such as Railway.

The course included several hands-on projects demonstrating these concepts, ranging from console applications to full systems combining REST APIs and WebSockets.

Next.js: El framework de React para producción

2025

During this course, I learned Next.js through the development of several projects, including a full application (Teslo-Shop) focused on web and e-commerce development. Throughout the course, I gained experience with React.js and TypeScript, REST API implementation, JWT-based authentication, and hybrid rendering (SSR, SSG, ISR, and CSR).

I also worked with dynamic and nested routing, responsive design using Material UI, Next UI, and Tailwind CSS, and integrated PostgreSQL. Additionally, I managed cookies, built dynamic forms with React Hook Form, and implemented payments using PayPal and credit cards.

The course also covered deployments across multiple platforms and best practices for version control using Git and GitHub.
